Aqua Products Pavilion From Saudi to World

This event showcases the most prominent Saudi aquaculture products, including fish, shrimp, and other items, and displays various types of live farmed fish. This is part of the Kingdom's efforts to develop this vital sector, enhance food security, and support economic growth, in line with Saudi Arabia's vision.

Recirculating Aquaculture System (RAS) Activity

This prototype represents an advanced step towards achieving sustainable and efficient aquaculture, using the latest technologies to ensure full control over the fish farming environment. The Recirculating Aquaculture System (RAS) relies on continuously recycling and purifying water, reducing the need for freshwater and minimizing environmental impact, while maintaining optimal water quality for healthy and safe fish growth.

The prototype allows for precise monitoring of environmental parameters such as temperature, dissolved oxygen, and nitrate levels, ensuring improved growth rates, reduced disease, and increased productivity. This system is also scalable and expandable, enabling researchers and investors to test new technologies before applying them on a large commercial scale.

Master Class (Cook with the Chef and Taste)

An innovative educational platform taking place in the Saudi International Marine Exhibition 2026. It provides live cooking lessons and workshops taught by expert chefs.

Number of participants: 20 professional chefs

Number of attendees: 300 people
